

PP/PE/PS Sheet Extrusion Line

Applications

In response to the market demand, Grace sheet production line has the advantages of compact structure, large and stable output, reasonable equipment configuration and high degree of automation. The sheet can be thermoformed into various packaging products with good gas barrier property, pure and health with no other additives, also with good toughness and ductility, excellent recovery characteristics, which can be widely used in medicine, food, electric appliance, toys and other packaging area, also the majority of printing industry.
